ORA, up in aged groups only in female
transport
carbon dioxide transport
cellular component organization
response to stress
cilium organization
cell projection assembly
response to wounding
complement activation
cellular detoxification
multicellular organismal−level iron ion homeostasis
coagulation
inflammatory response
Description
0.0

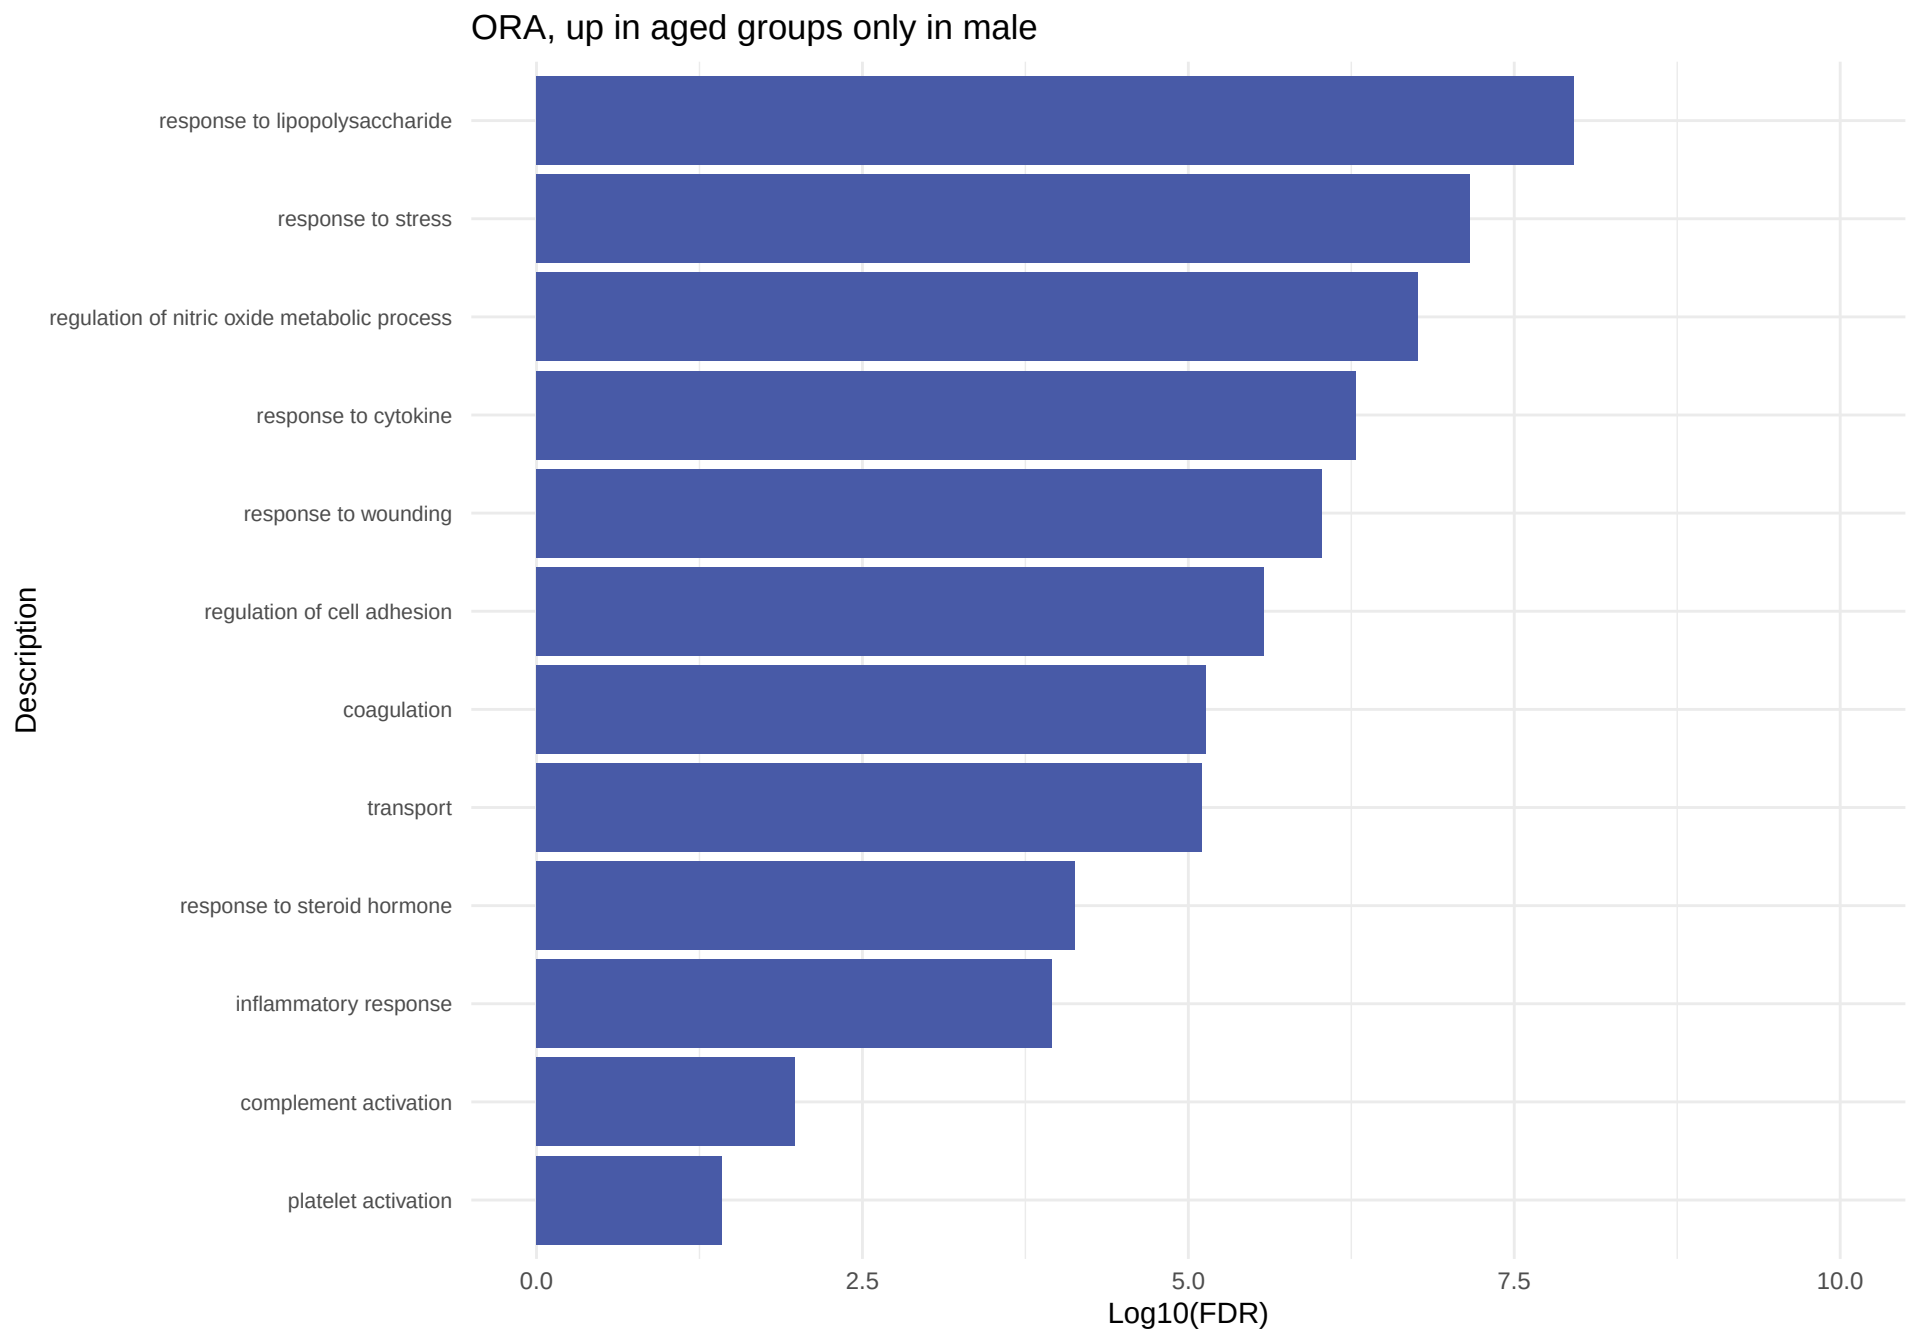
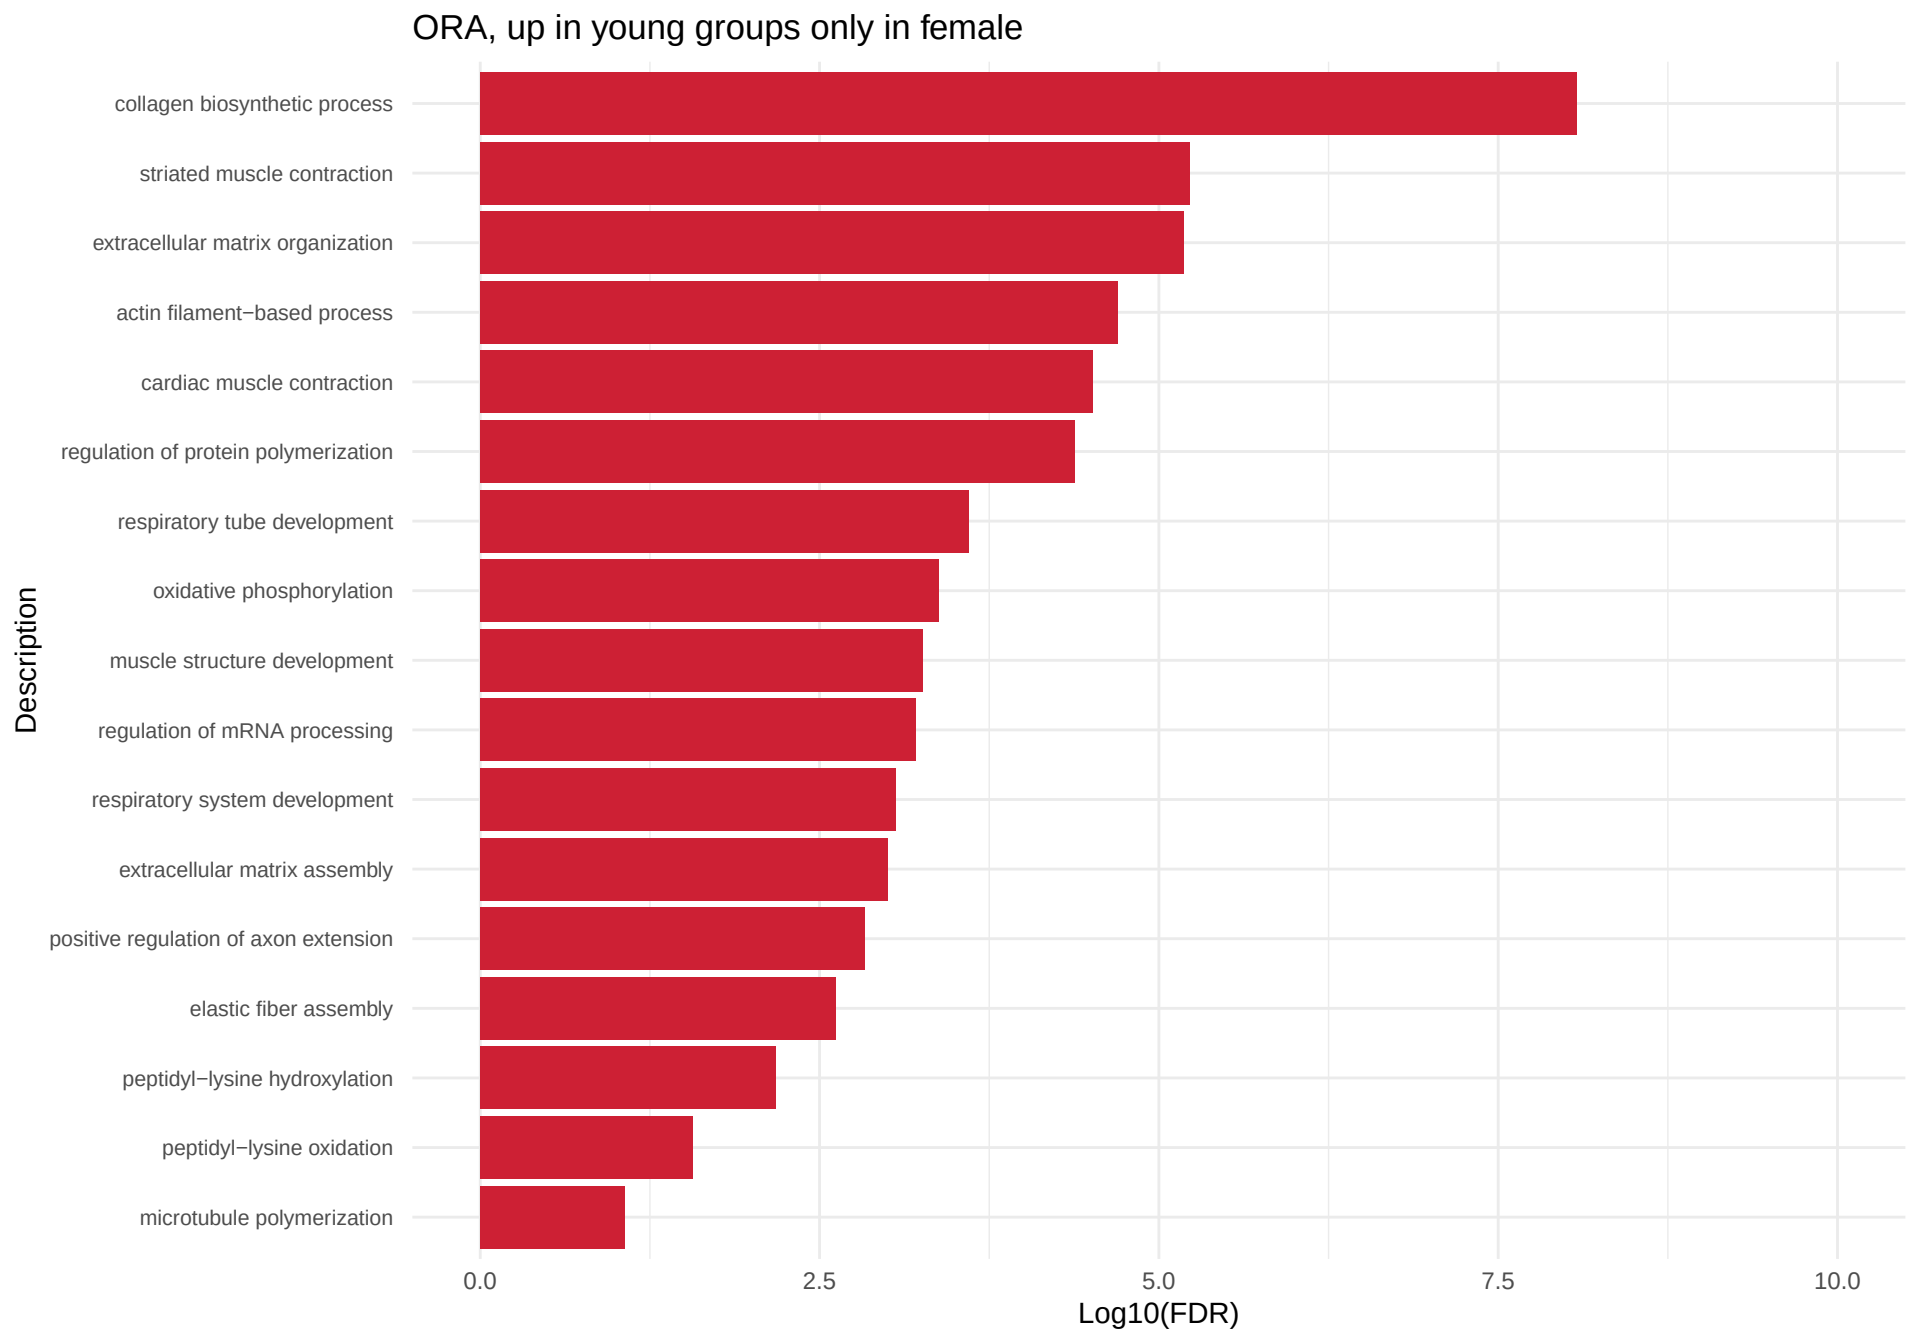
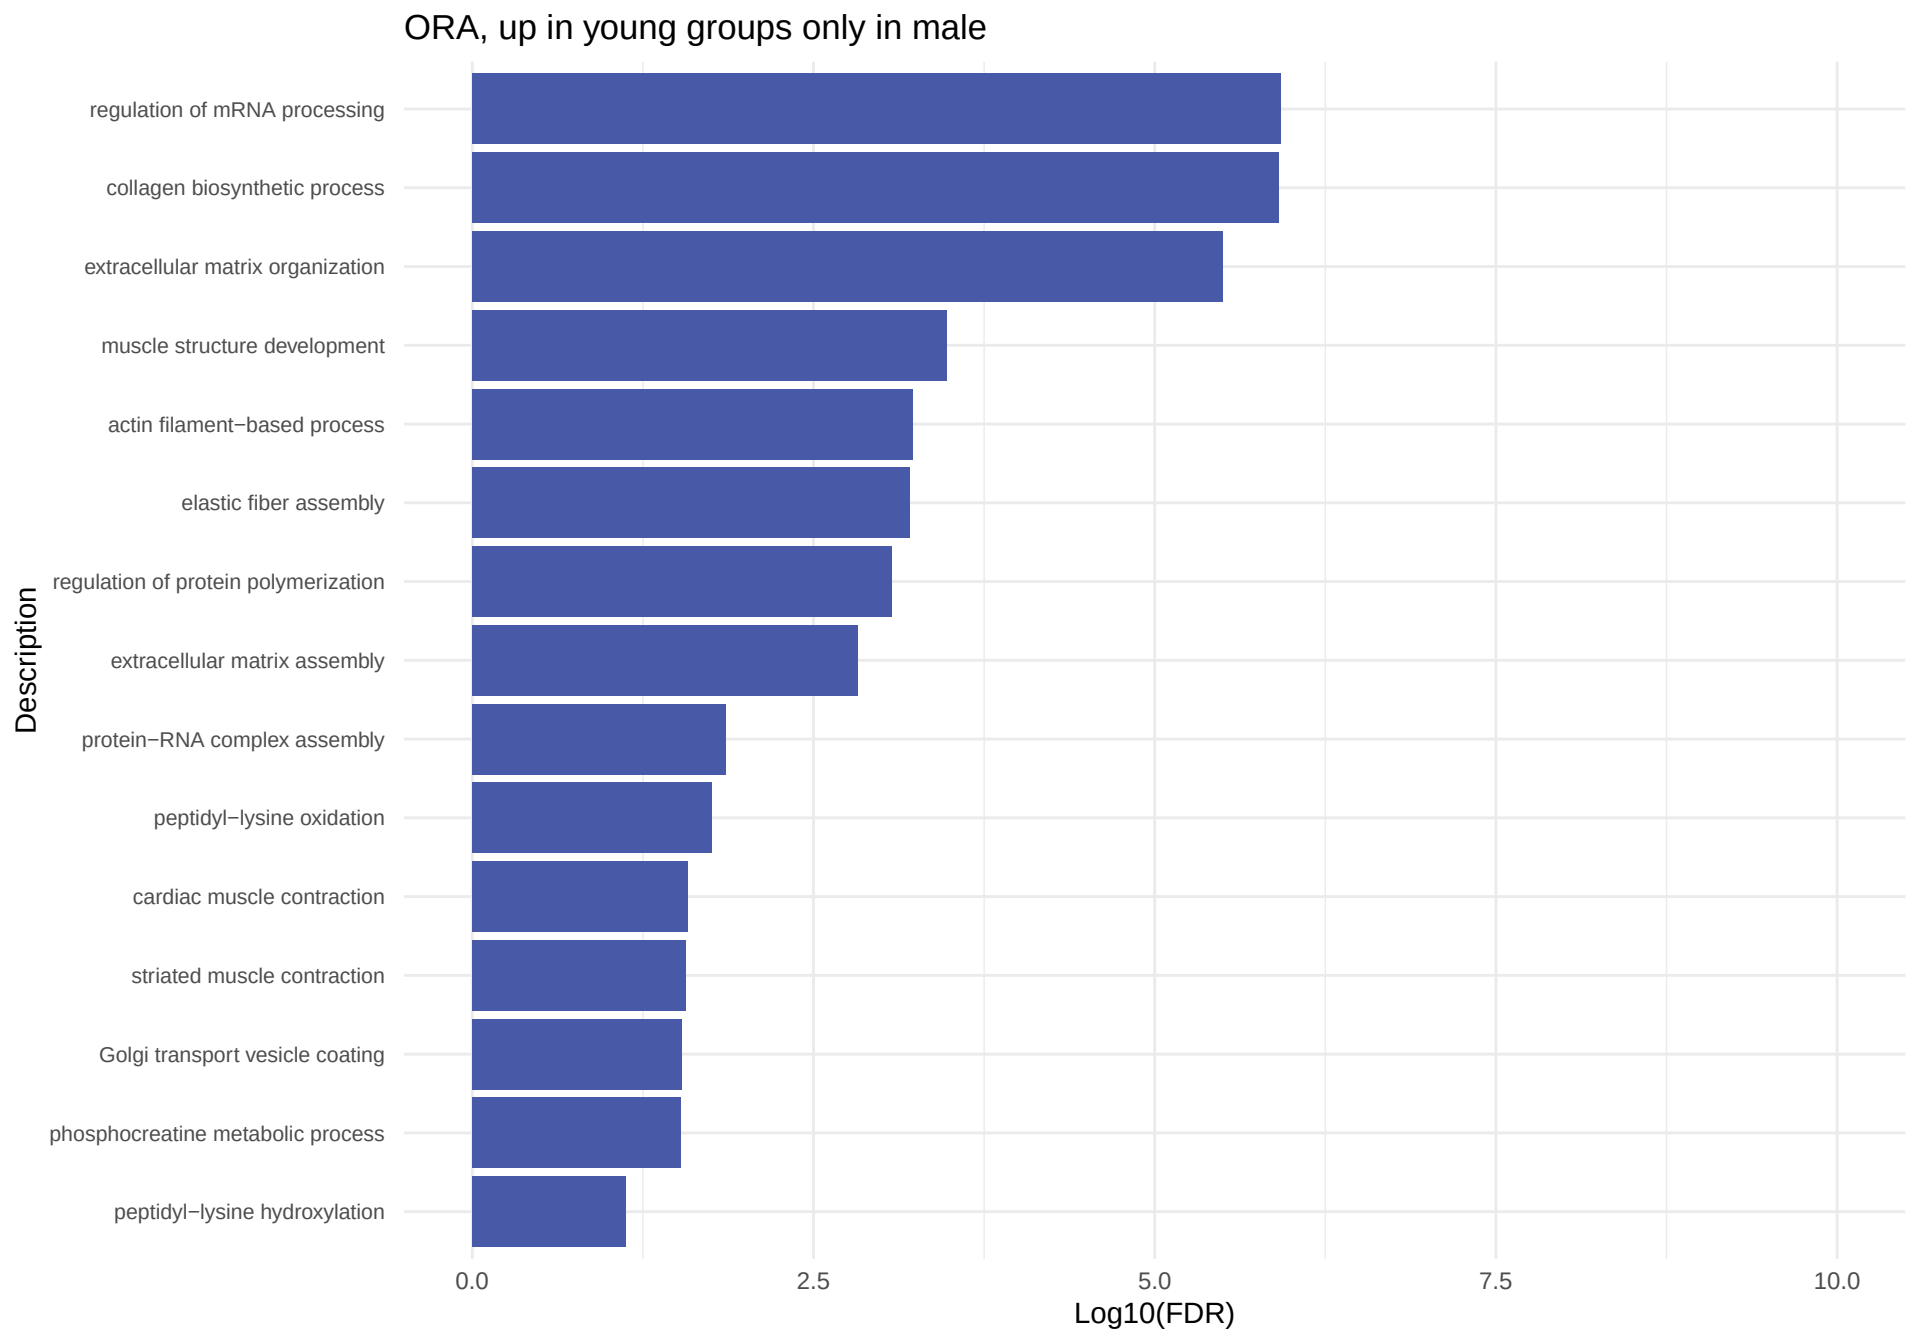
5.0
7.5
10.0
Log10(FDR)



ORA, up in aged groups only in male
response to lipopolysaccharide
response to stress
regulation of nitric oxide metabolic process
response to cytokine
response to wounding
regulation of cell adhesion
coagulation
transport
response to steroid hormone
inflammatory response
complement activation
platelet activation
Description
0.0
2.5
5.0
7.5
10.0
Log10(FDR)



ORA, up in young groups only in female
collagen biosynthetic process
striated muscle contraction
extracellular matrix organization
actin filament−based process
cardiac muscle contraction
regulation of protein polymerization
respiratory tube development
oxidative phosphorylation
muscle structure development
regulation of mRNA processing
respiratory system development
extracellular matrix assembly
positive regulation of axon extension
elastic fiber assembly
peptidyl−lysine hydroxylation
peptidyl−lysine oxidation
microtubule polymerization
Description
0.0
2.5
5.0
7.5
10.0
Log10(FDR)



ORA, up in young groups only in male
regulation of mRNA processing
collagen biosynthetic process
extracellular matrix organization
muscle structure development
actin filament−based process
elastic fiber assembly
regulation of protein polymerization
extracellular matrix assembly
protein−RNA complex assembly
peptidyl−lysine oxidation
cardiac muscle contraction
striated muscle contraction
Golgi transport vesicle coating
phosphocreatine metabolic process
peptidyl−lysine hydroxylation
Description
