ORA, up in aged groups only in bottom
response to external stimulus
immune system process
response to stimulus
immune effector process
proteolysis
defense response
protein maturation
response to stress
negative regulation of cell migration
positive regulation of angiogenesis
complement activation
negative regulation of cellular component organization
multicellular organismal−level iron ion homeostasis
Description

ORA, up in aged groups only in central
response to stimulus
response to external stimulus
immune system process
immune effector process
defense response
cellular component organization
response to stress
complement activation
cilium assembly
coagulation
phospholipid metabolic process
lipid transport
small GTPase−mediated signal transduction
endocytosis
exocytosis
Description

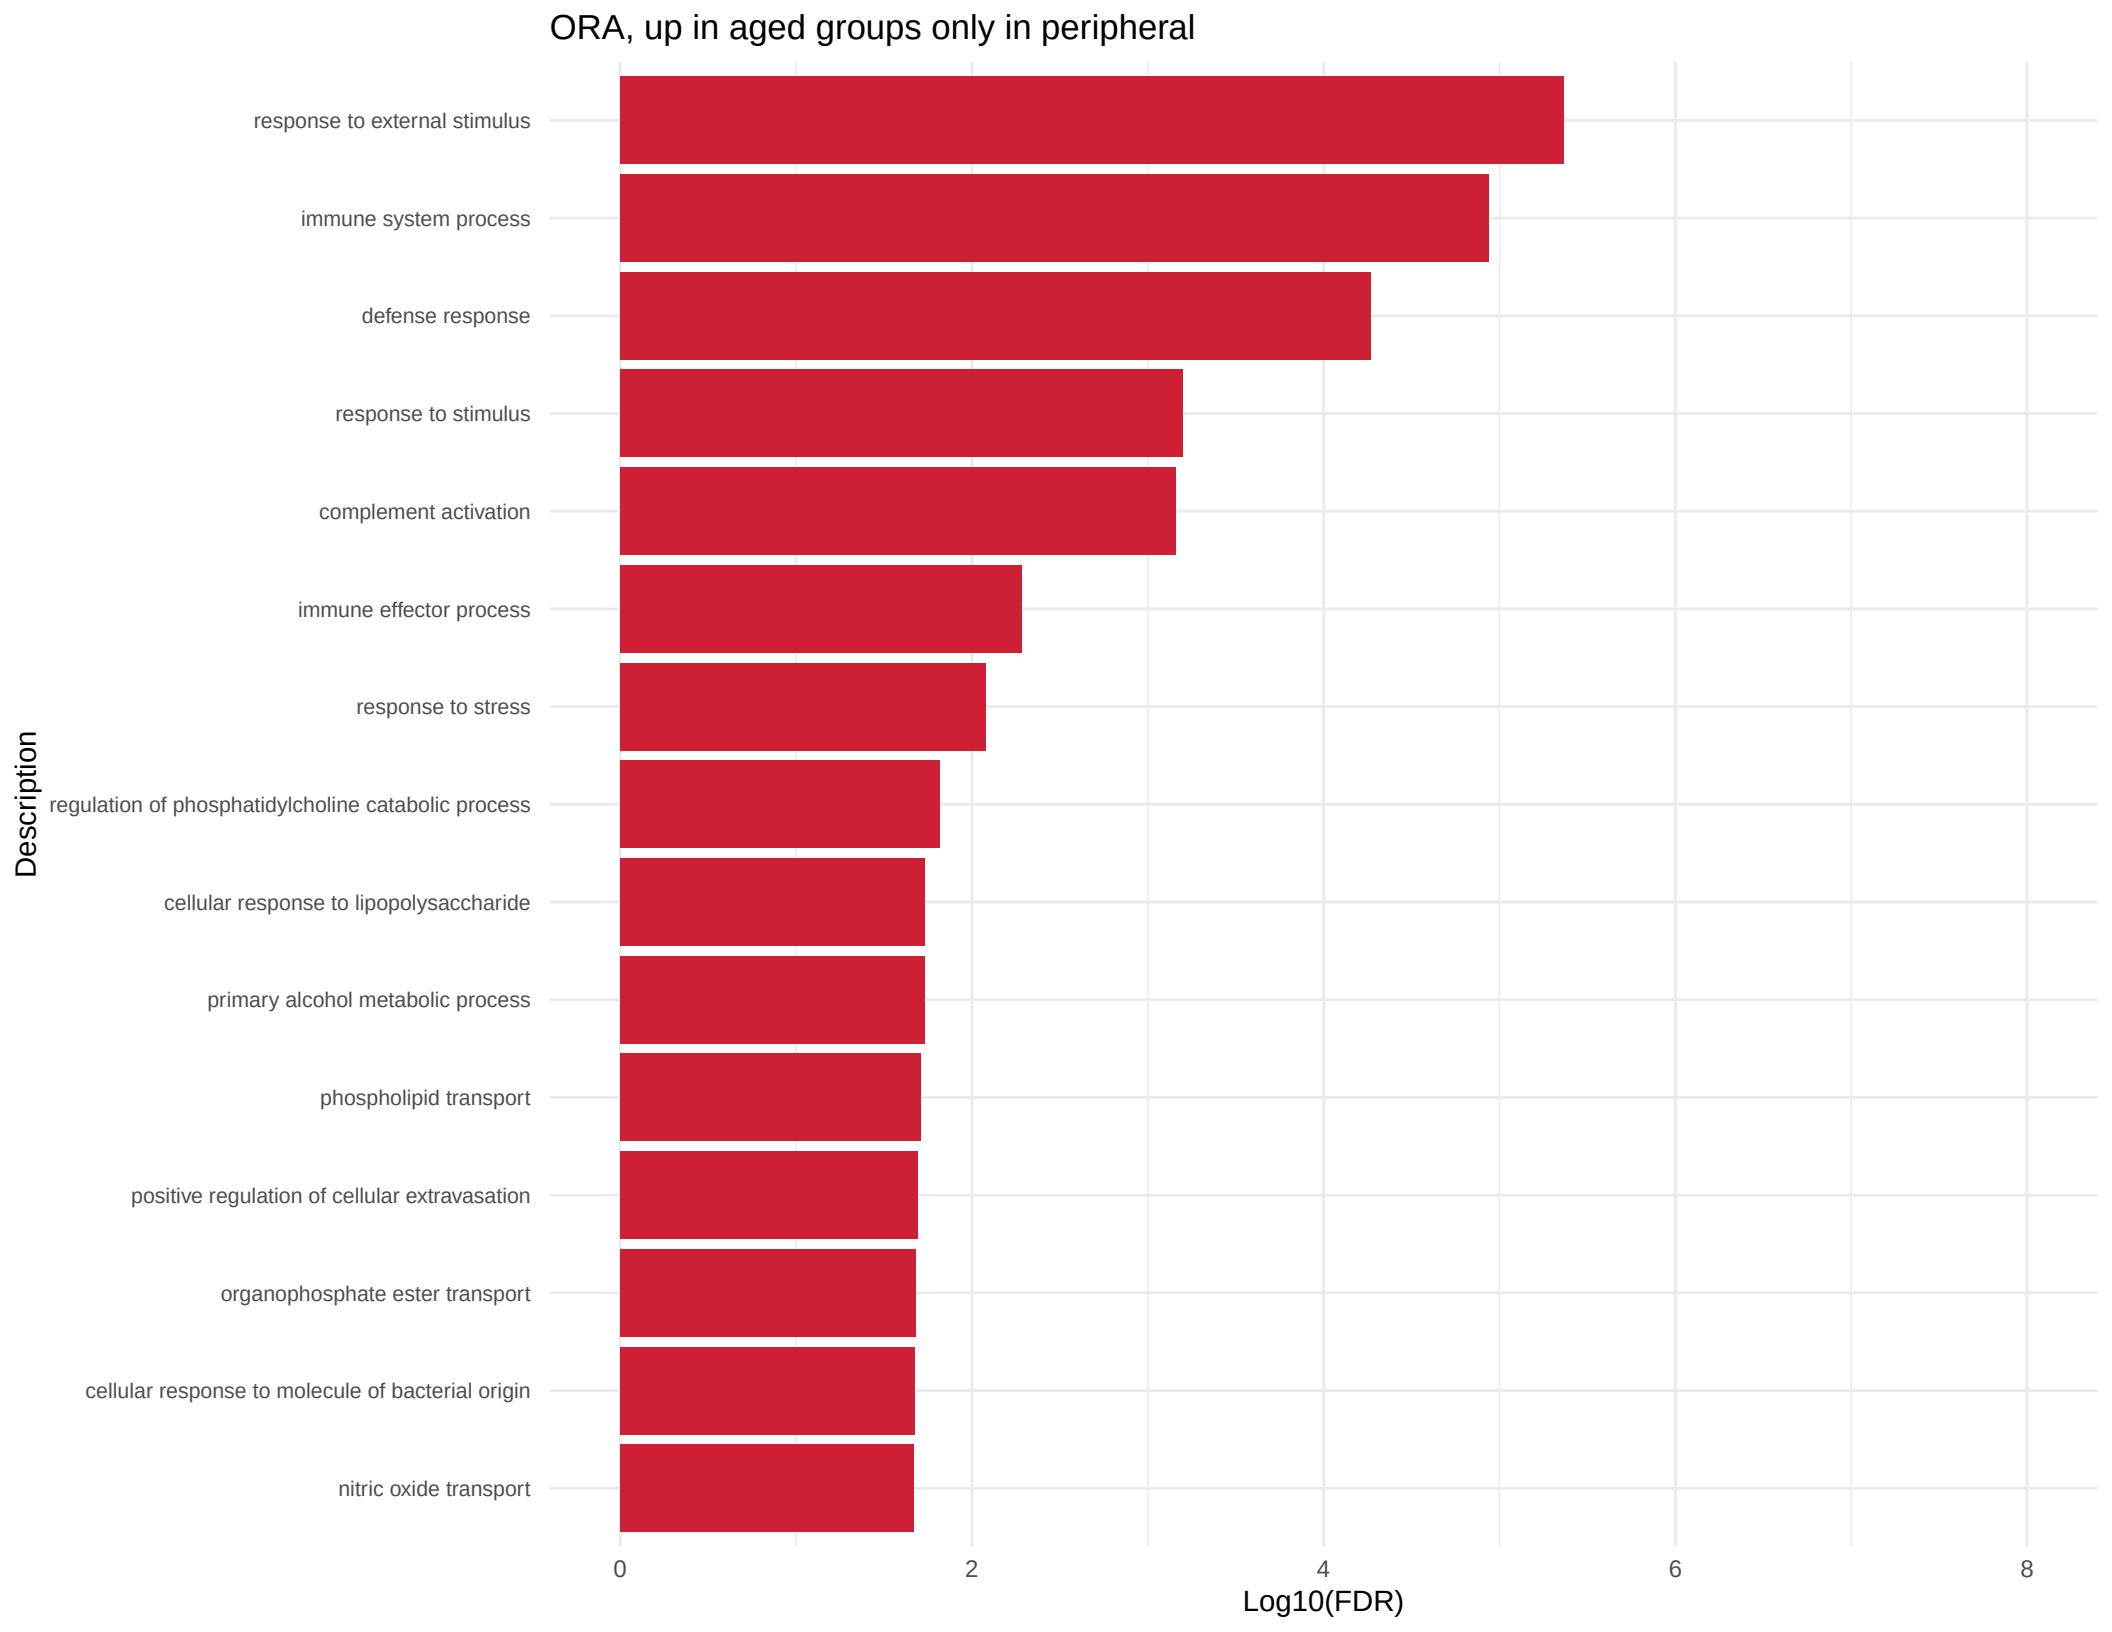
Log10(FDR)



ORA, up in aged groups only in peripheral
response to external stimulus
immune system process
defense response
response to stimulus
complement activation
immune effector process
response to stress
regulation of phosphatidylcholine catabolic process
cellular response to lipopolysaccharide
primary alcohol metabolic process
phospholipid transport
positive regulation of cellular extravasation
organophosphate ester transport
cellular response to molecule of bacterial origin
nitric oxide transport
Description

ORA, up in young groups only in central
collagen metabolic process
striated muscle contraction
collagen biosynthetic process
muscle contraction
muscle structure development
cardiac muscle contraction
muscle system process
oxidative phosphorylation
extracellular matrix organization
extracellular structure organization
actin−myosin filament sliding
response to hypoxia
cellular response to stress
elastic fiber assembly
ATP synthesis coupled electron transport
protein hydroxylation
regulation of intrinsic apoptotic signaling pathway
actin filament organization
