ORA, up in aged groups only in bottom
response to external stimulus
defense response
response to stress
response to stimulus
immune effector process
negative regulation of cellular component organization
immune system process
negative regulation of cell migration
coagulation
complement activation
receptor−mediated endocytosis
regulation of tumor necrosis factor production
regulation of proteasomal protein catabolic process
multicellular organismal−level iron ion homeostasis
Description

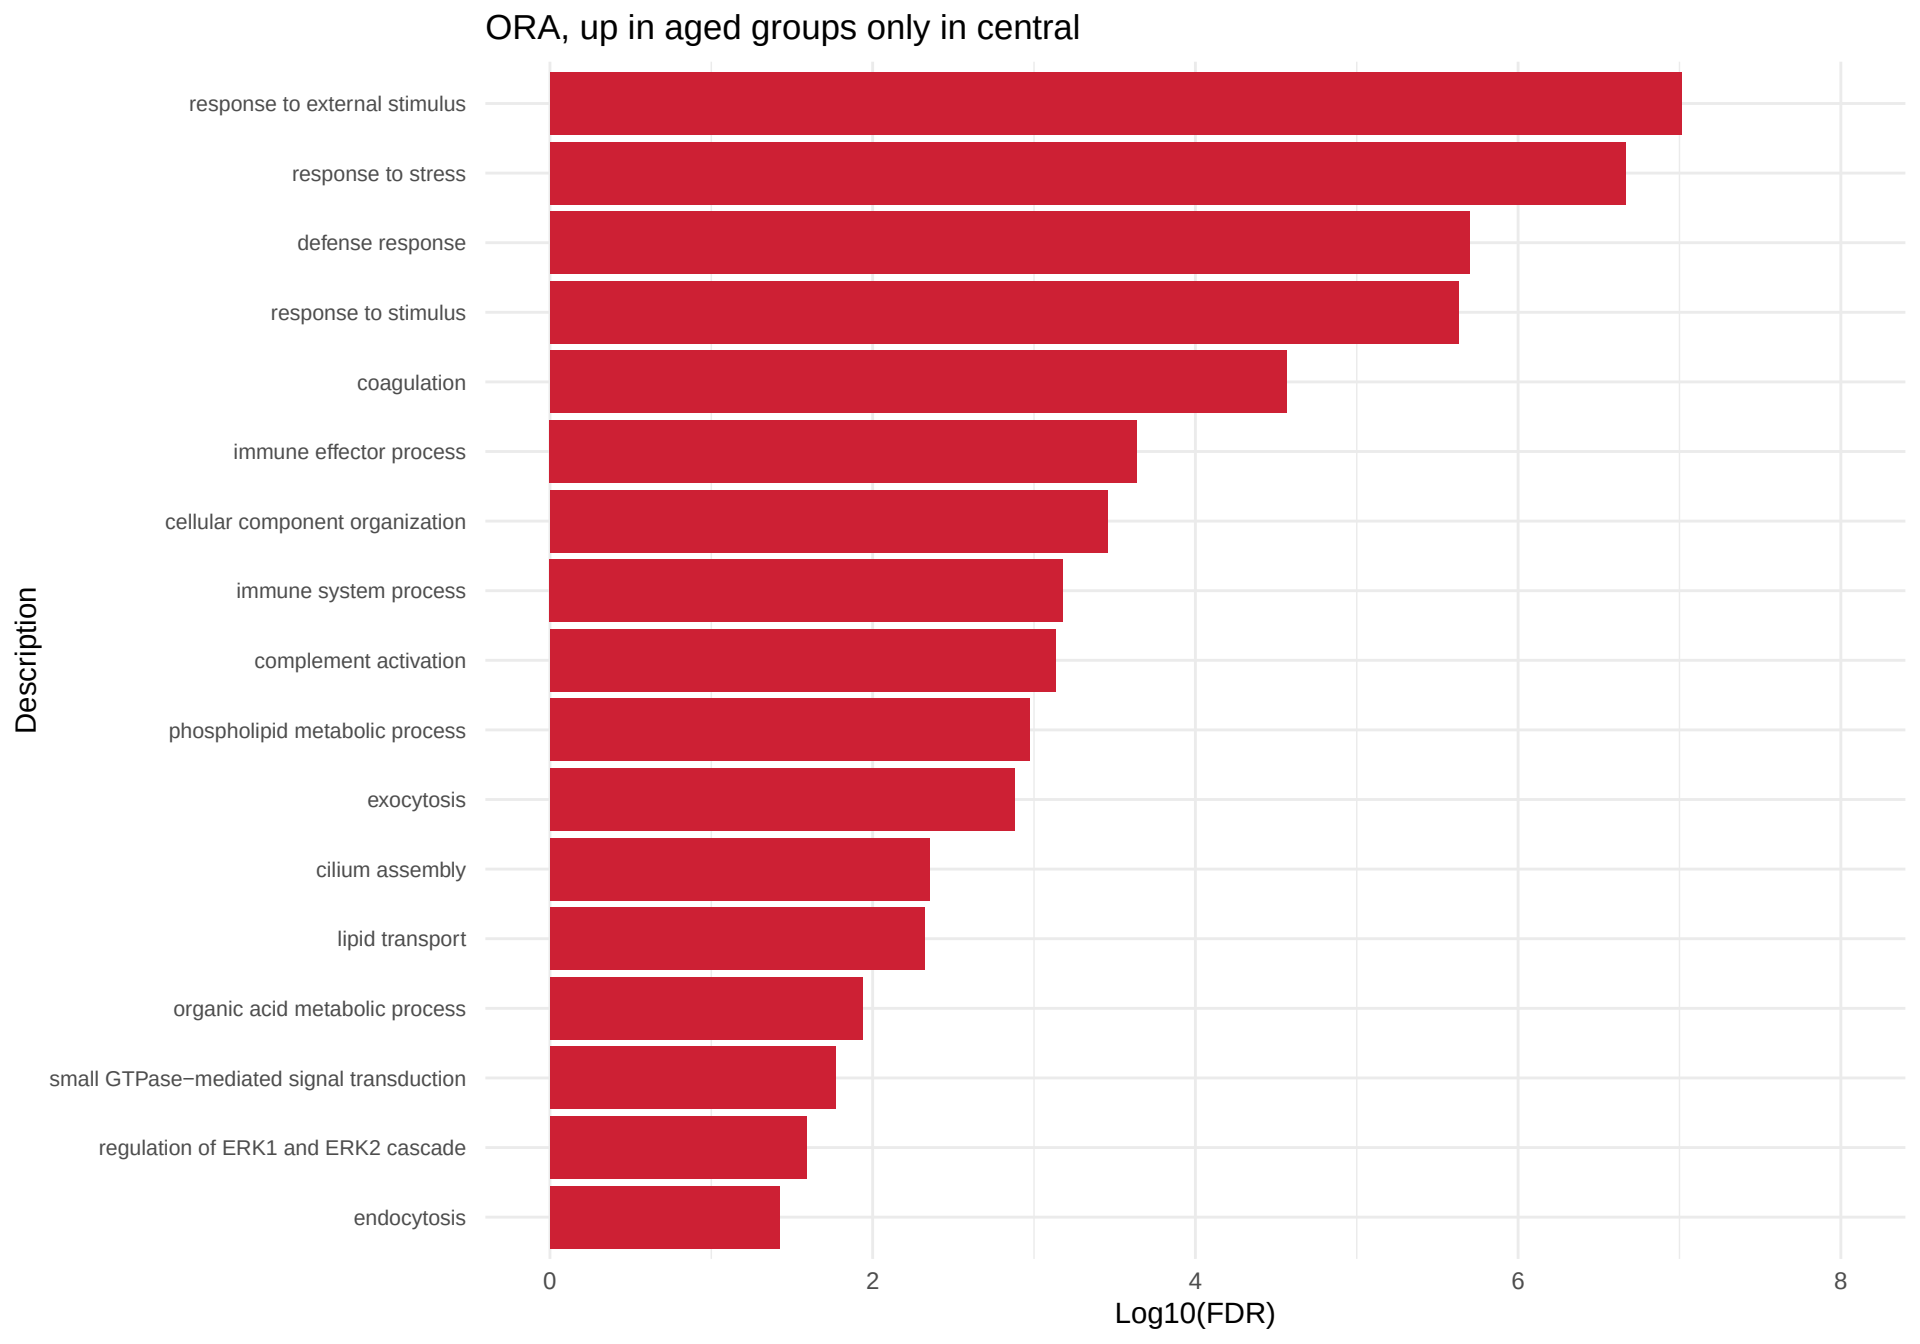
Log10(FDR)



ORA, up in aged groups only in central
response to external stimulus
response to stress
defense response
response to stimulus
coagulation
immune effector process
cellular component organization
immune system process
complement activation
phospholipid metabolic process
exocytosis
cilium assembly
lipid transport
organic acid metabolic process
small GTPase−mediated signal transduction
regulation of ERK1 and ERK2 cascade
endocytosis
Description
0
2

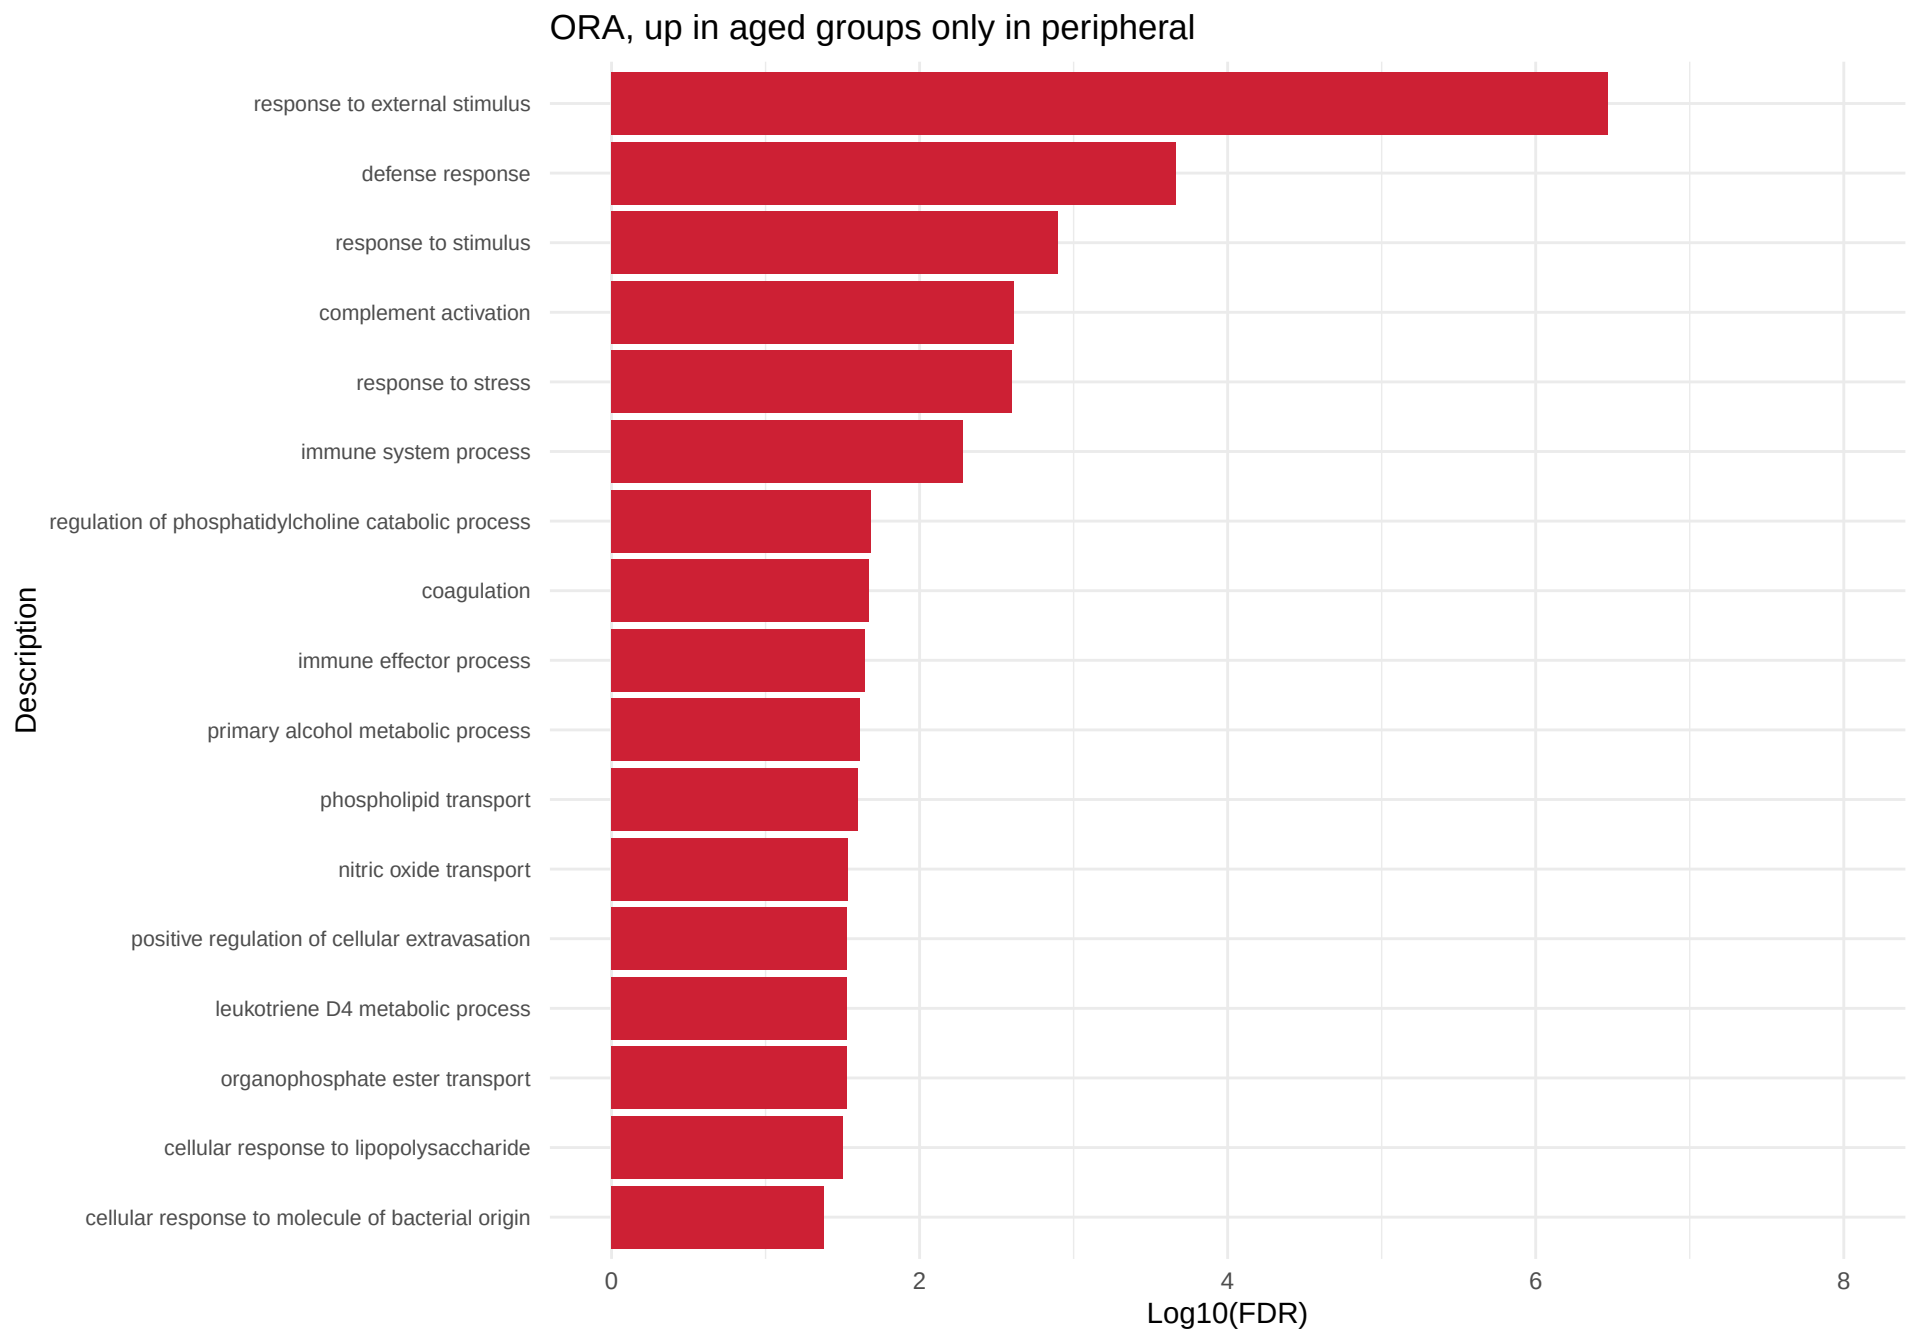
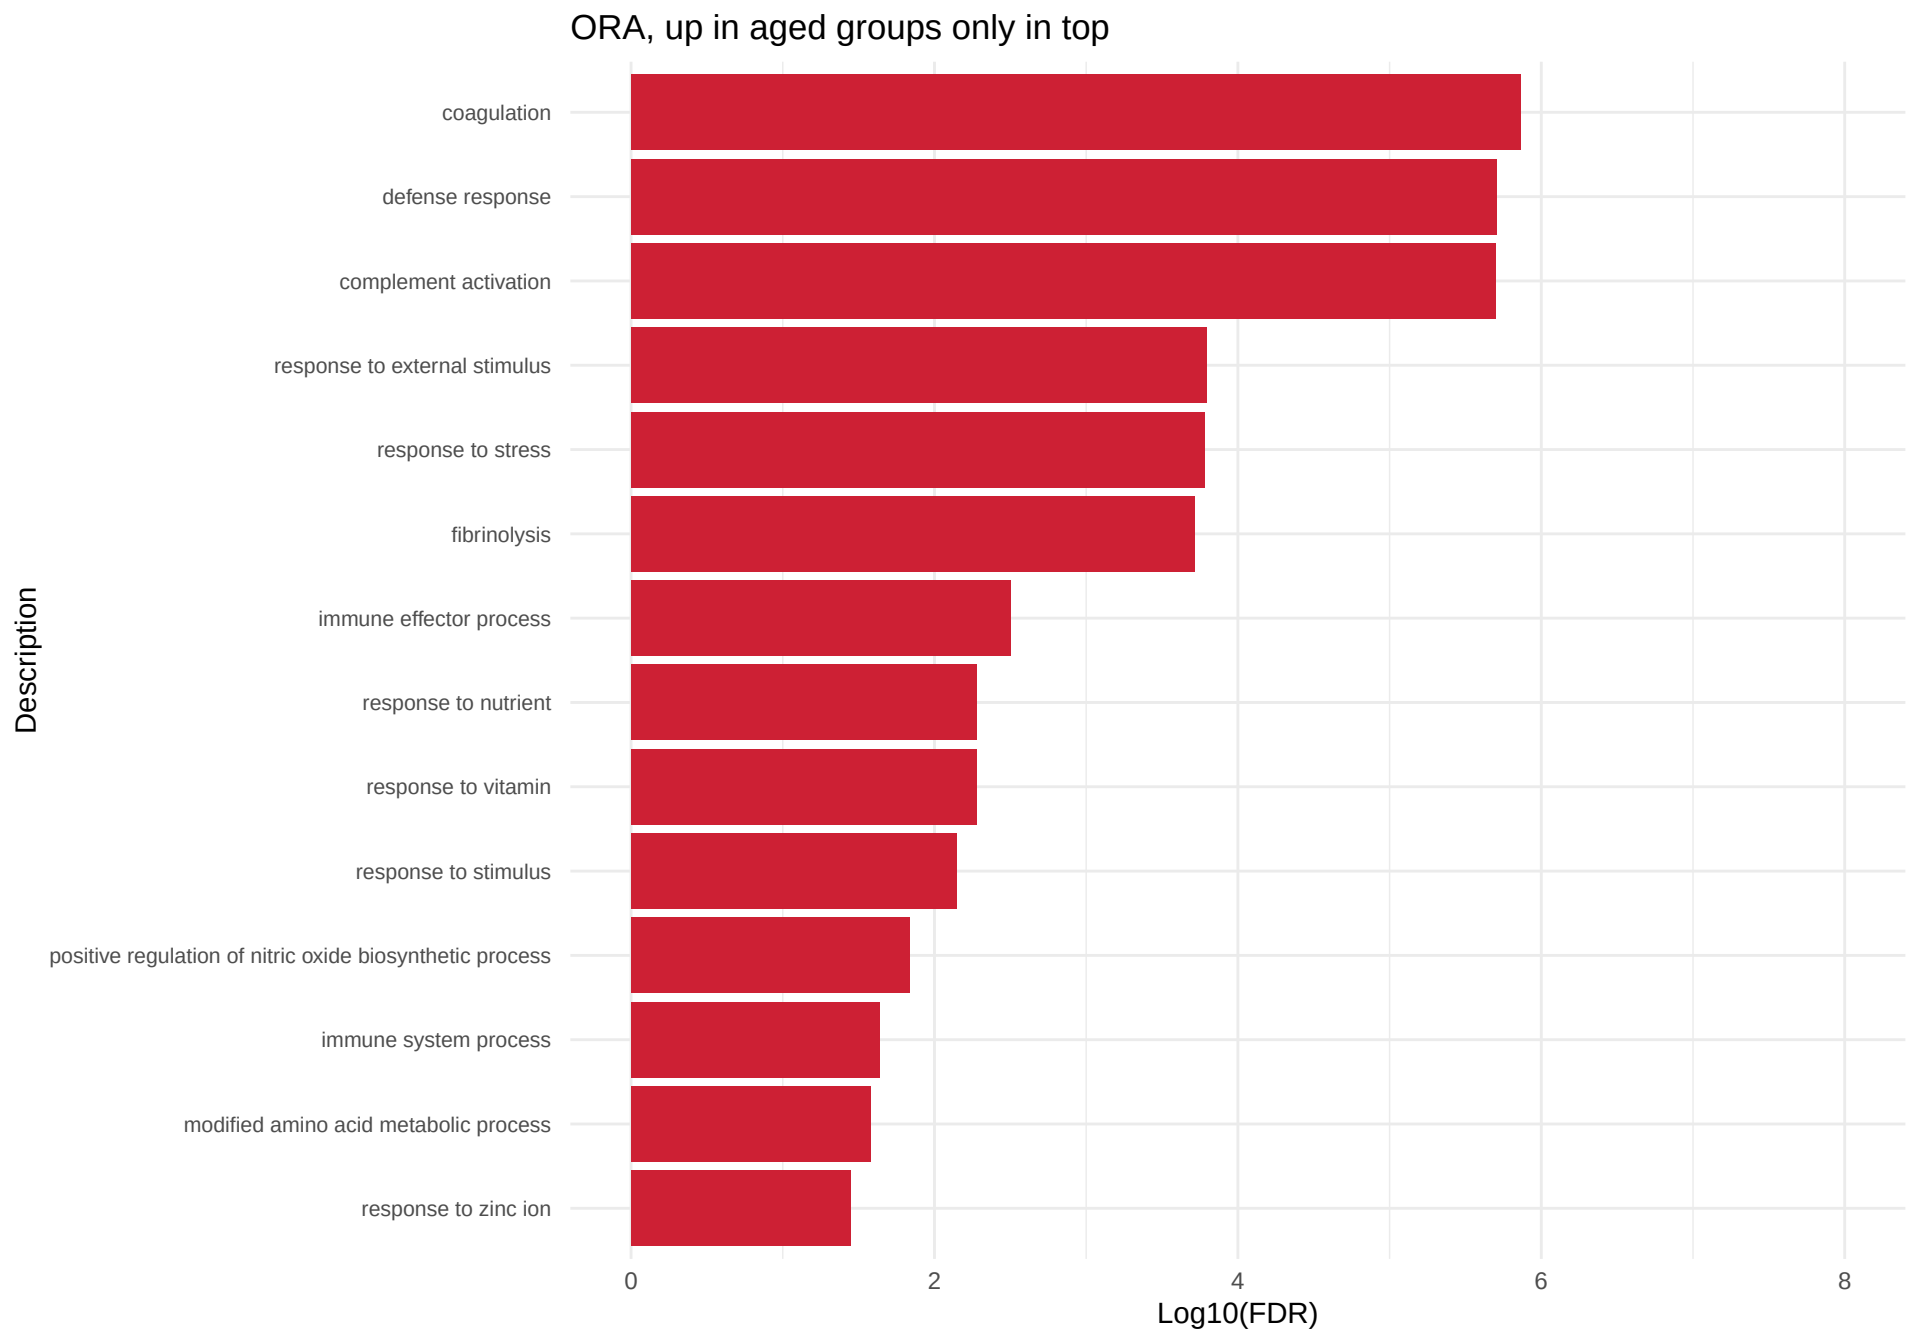
8
Log10(FDR)



ORA, up in aged groups only in peripheral
response to external stimulus
defense response
response to stimulus
complement activation
response to stress
immune system process
regulation of phosphatidylcholine catabolic process
coagulation
immune effector process
primary alcohol metabolic process
phospholipid transport
nitric oxide transport
positive regulation of cellular extravasation
leukotriene D4 metabolic process
organophosphate ester transport
cellular response to lipopolysaccharide
cellular response to molecule of bacterial origin
Description
0
2
4
6
8
Log10(FDR)



ORA, up in aged groups only in top
coagulation
defense response
complement activation
response to external stimulus
response to stress
fibrinolysis
immune effector process
response to nutrient
response to vitamin
response to stimulus
positive regulation of nitric oxide biosynthetic process
immune system process
modified amino acid metabolic process
response to zinc ion
